What you need to know about direct and indirect restorative materials and techniques to grow your practice.

CLINICIAN'S CHOICE

# PowerMix

For the delivery of void-free impression material with the press of a button

**C**apturing impressions using chairside VPS materials has proven to be an effective solution that can offer clinicians a host of benefits, such as flexible setting times, short intraoral setting times, excellent dimensional stability, accurate detail reproduction, and resistance to slumping, to list a few. Unfortunately, traditional 1:1 impression guns, when used with VPS tray materials, are often tiring and inefficient to hand pump.

Fast and effortless, the PowerMix Automatic VPS dispenser from CLINICIAN'S CHOICE delivers perfectly mixed, void-free impression material with the press of a button. Now, dental professionals can fill a full-arch impression tray in 10 seconds or less with PowerMix—no more hand pumping.

"I felt it would be a great alternative to using traditional guns that strain the assistant's hands—as the PowerMix can fill a full-arch tray in 10 to 15 seconds," said noted lecturer Todd Snyder, DDS, FAACD.

Lightweight and portable, the PowerMix design has a small footprint stand for storage or direct dispensing and can be easily transported between operatories. With no cords, a single battery supports 4 to 5 fully loaded 120 mL cartridges before needing to be recharged.

"Additionally, it is very convenient having a fast, efficient dispensing device in every room. My staff has been very happy that the PowerMix can go in any room we are working since it is portable," Dr. Snyder said. "They no longer have to go to the large bulk dispenser that is often stationary in one part of the office and then run back to the room with the impression tray."

When dental offices combine PowerMix with CLINICIAN'S CHOICE's 3rd generation AFFINITY impression material, they are setting up a restorative system that will provide excellent flow and create extreme impression detail. Clinically proven for exceptional accuracy, AFFINITY Heavy Body is designed with an ideal flow and shore hardness rating for accurate full-

arch tray impressions, while AFFINITY InFlex, an ultra-rigid tray material, is designed specifically to prevent distortion with the dual-arch technique.

"With PowerMix, there is no more wasting material or chair-time inefficiency by using multiple cartridges to fully fill a full-arch tray. This device allows for automated, easy tray material dispensing in half the time it would take to dispense with other units," added Dr. Snyder.

## TOP 5 REASONS WHY DR. SNYDER USES POWERMIX

- 1 Fast**—provides an even mix, eliminating voids in a fraction of the time.
- 2 Convenient**—effortless tray loading without hand fatigue.
- 3 Portable**—easily transportable from one operatory to the next.
- 4 Lightweight**—weighs 2 pounds with full cartridge.
- 5 Versatile**—extrudes material chairside or dispenses via its small stationary base.
